

Tseung Kwan O – Lam Tin Tunnel – Main Tunnel and Associated Works

Road Works at Junction of Lei Yue Mun Road and Eastern Harbour Crossing Slip Road

Through the implementation of the Tseung Kwan O – Lam Tin Tunnel Project, the Civil Engineering and Development Department and the Transport Department have jointly carried out junction improvement works on Lei Yue Mun Road and the Eastern Harbour Crossing (EHC) Slip Road, including widening the existing Lei Yue Mun Road and improving the junction layout of Lei Yue Mun Road and the EHC Slip Road, in order to alleviate the existing heavy traffic congestion. The improvement works, which increase the traffic lanes of Lei Yue Mun Road (Southbound) from 3 to 4 lanes, providing two lanes going straight towards Yau Tong and two right turn lanes towards EHC, have been completed in May 2024. Additional pedestrian crossing facilities have been constructed at Lei Yue Mun Road (near Shun Lai House of Yau Lai Estate) and EHC Slip Road (near the Lam Tin Ambulance Depot), to provide a safe and more convenient route to and from Lam Tin MTR Station. The implementation of this comprehensive set of traffic measures at this junction has shown remarkable results. The traffic congestion issues that previously occurred during peak hours have now been significantly improved.

Widening of the Existing Lei Yue Mun Road and Improvement of the Road Junction

During the construction stage, the project team maintained close coordination with the relevant government departments, District Councillors, local residents and other stakeholders to seek their opinions. The project team continued to optimise the temporary traffic arrangements in order to minimise the impacts to the nearby residents and road users.

The project team would like to take this opportunity to express gratitude to all District Councillors, stakeholders and public for their support and valuable opinions given to the Project, especially for their understanding and tolerance to all the inconvenience that may have been caused by the road widening and resurfacing works.
